## Experiment:3A–Solution of linear differential equation by method of variation of parameters

Submit the e-record for the following.

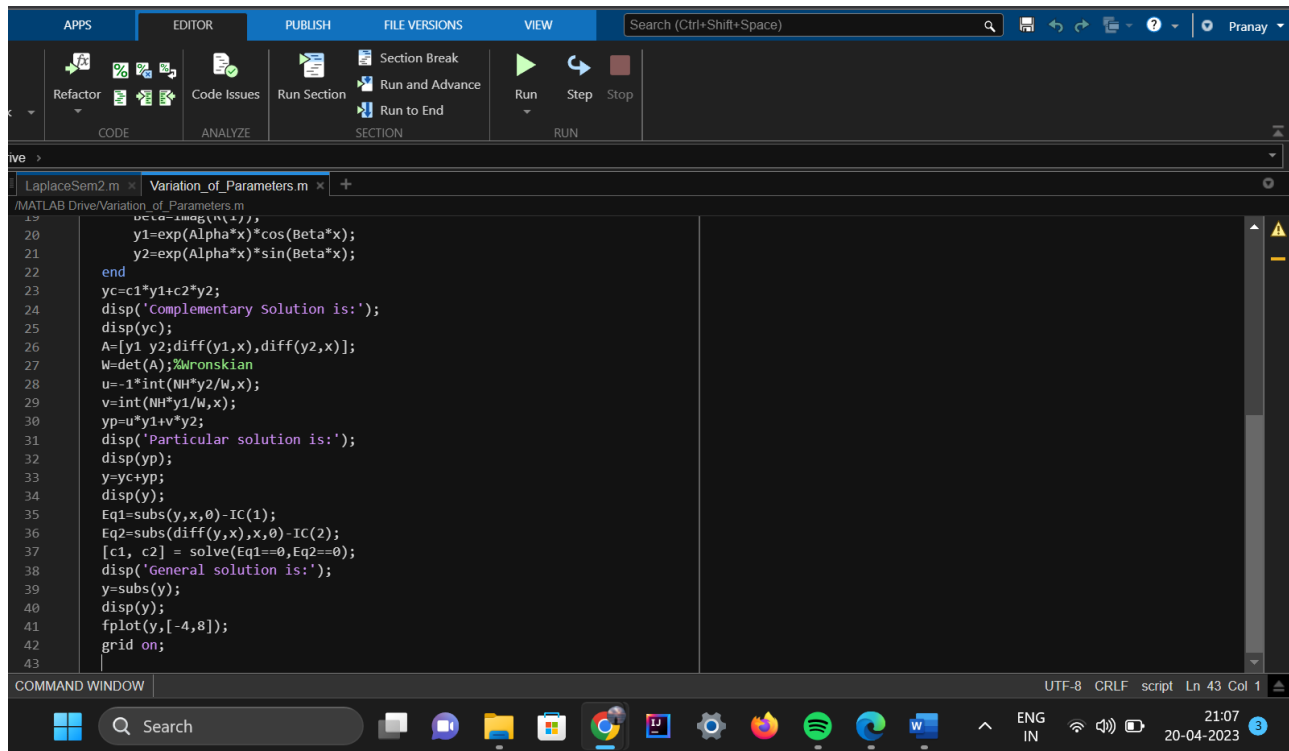

1. Consider the problem of suspension cable  $\frac{d^2y}{dx^2} = \frac{w(x)}{T_H}$  with the conditions  $y(0) = 0$  ,  $y'(0) = 0$ , where  $w(x) = x^2, T_H = 100$ . Plot shape of the cable in the range  $[-4, 8]$ .

## Experiment:3B–Solution of linear differential equation by Laplace Transforms

1. Determine the response of the damped mass- spring system under a square wave, modeled by  $y'' + 3y' + 2y = r(t)$ , where  $r(t) = \begin{cases} 0, & 0 < t < 1 \\ 2, & 1 < t < 2 \\ 0, & t \geq 2 \end{cases}$ . Subject to the initial conditions  $y(0) = y'(0) = 0$ . Plot the solution.
